THE GREATEST ADVANCE STEP EVE MADE IN THE ART.

The main difficulty in wearing artificial teeth is they do not hook in their place firmly enough and add to this the annoyance of food gettin wider the plate while cating. I have discovered a method of so constructing the plate of which the toeth are set that they will not star or drop while cating or speaking, neither will any particles of food get under the plate, in matter what the condition of the mouth is which is not true of any method hithertonsed.

I have secured Letters Patent for the Unite States, England and France.
